However the correct answer is $x=-2$. How to get this? Thanks! A: Your answer $x=\frac{-4}{3}$ is incorrect because you have made a mistake in using the quadratic formula. The quadratic formula gives you the two solutions of an equation of the form $ax^2+bx+c=0$, which we write as $x=\frac{-b\pm\sqrt{b^2-4ac}}{2a}$. This is when we use the "standard" version of the quadratic formula, i.e. by using the characteristic equation, ax^2+bx+c
