As a remote consultant, it's often tempting to hit the bar after work with a co-worker or client. At that point, you've come in contact with multiple environments and may not know how to go about for helping a team debug a problem. And yes, there are many different causes of data loss and recovery, but certain tools and processes handle one of the most critical types of data in the most effective way. In this article, we'll go over the top 5 database backup apps for Windows and Mac and explain why they're different. Of course, it's impossible to predict all the database problems your application will experience. The possible causes of disaster database are many, including rogue or corrupt connections to the database or another component, misconfigured or uninitialized connections to the database, and various system failures. This article walks you through the steps to diagnose and resolve data loss problems Remote Desktop Services RDS and RemoteFX are no longer new technologies but proved to be a very powerful solution for users requiring high speed access to desktops remotely using a centralized server. Virtualization and cloud computing are the current ones of the future. While it's not hard to see the change in the tech industry, there are still many IT departments that don't see the benefit of using virtualization in the cloud. There are many challenges associated with managing the virtual infrastructure, and one of the biggest one is the bandwidth. Today, we're talking about a hot topic - performance and reliability at a high availability level for all business applications.
